Press Release

OPEN LABS RELEASES STAGELIGHT 1.2 UPDATE

The Easy Way To Create Music – Just Got Easier!

Austin, TX. – October 16, 2013 - Open Labs, LLC. (www.openlabs.com), today announced StageLight 1.2 Update available immediately. StageLight 1.2 Update is FREE for all registered owners and is available for download by simply launching the app. For those who have not purchased StageLight, you can download StageLight for only \$9.99 at www.openlabs.com. A FREE 30-day trial is also available for download.

StageLight's ease of use, cutting edge functionality and low price has allowed Open Labs to capture customers in more than 117 countries worldwide and has opened countless possibilities for music creators. Open Labs is currently working with some of the largest technology companies on the planet to help bring a faster, lighter, more powerful touch screen music creation experience to the masses. Some of those companies include: Intel, DELL, Lenovo, Acer, Microsoft and others. Rajeev Puran, Application Engineer for Intel, explains, "StageLight is a music creation catalyst for the next generation of touch-based devices. Intel is working closely with Open Labs to develop new technologies that help address specific wants and needs of music creators. We are excited about our relationship and the simple, affordable and powerful software StageLight delivers."

StageLight 1.2 Update expands the app's core creation capabilities, performance and overall functionality through the addition of several new features and enhancements including KeyLock™, which enables you to maintain the key of your composition quickly and easily, without years and years of lessons and practice. "Musicians can now easily create both rhythm and lead tracks for their music - regardless of professional training or knowledge of music theory." explained Cliff Mountain, CEO and owner of Open Labs. "For aspiring musicians, KeyLock, lends guidance to those trying to create melodies for the first time, 'soloing' or practicing their improvisational skills." said Mountain.

Also included in StageLight 1.2 Update is an expanded native effects suite including: *Reverb, Flanger, Parametric EQ, Chorus, Bitcrusher and Limiter*. This represents a major expansion of StageLight sound effects while maintaining a lighter footprint for faster, more powerful CPU performance. There are also several exciting updates to the StageLight's MIDI/Drum Editor, a cleaner UI (user-interface) design and better access to touch screen controls across multiple screen sizes in StageLight. Finally, StageLight's all-new In-App Store allows you to easily add and download new content, audition sounds and purchase exclusive packs directly from inside the app.

Today, StageLight is available for PCs that have Windows 7 or Windows 8, a minimum of 4 GB of RAM and at least an i3 processor or equivalent. StageLight is available in English and in simplified Chinese. For more information on StageLight 1.2, a video can be found here: <http://youtu.be/BT-ssbSTkrM>.
